

Tyler Hwang

San Jose, CA | tylerhwang333@gmail.com | github.com/tylerhwang333-glitch

EDUCATION

San Jose State University, College of Engineering

San Jose, CA

BS in Software Engineering

Expected May. 2029

- Relevant Courses: Data Structures and Algorithms, Discrete Math, Calculus III, General Physics II
- Organization: Software and Computer Engineering Society @ SJSU

EXPERIENCE

Development Team Officer

Aug. 2026 – Present

Software and Computer Engineering Society @ SJSU

San Jose, CA

- Implemented a search tool for Costco gas prices using React.js, Docker and TailwindCSS
- Reverse engineered Costco's REST APIs with Chrome DevTools to gather store data
- Wrote unit tests in Mocha and Chai to validate robust JSON parsing logic
- Deployed the tool via Nginx and Docker, serving minified JavaScript for faster loads

Software Engineering Intern

May 2026 – Aug. 2026

Software and Computer Engineering Society @ SJSU

San Jose, CA

- Created a URL shortening service in Python, FastAPI, SQLite and Docker for 500+ users
- Utilized Docker to containerize API and serve static content with Nginx
- Added Prometheus metrics and Grafana dashboards for server monitoring

PROJECTS

Rankup | *Python, FastAPI, React, TypeScript, Redis, Docker*

[GitHub](#)

- Built an AI post-game coach for CS2 that flags the decisions that cost a round
- Built a Python/FastAPI backend with rule-based detectors for mistakes like overrotation
- Used a Redis vector index to surface a player's recurring mistakes across matches
- Integrated Claude to generate coaching reports and drills, with a deterministic fallback
- Containerized the full stack with Docker Compose and served the React/TypeScript frontend via Nginx

Compass | *React, TypeScript, Vite, Tailwind CSS*

[GitHub](#)

- Built the frontend for an agent that turns one filed issue into a self-running dev loop
- Built a live issue-lifecycle timeline in React Router 6, mirroring backend event stages
- Built a mock localStorage adapter alongside an HTTP one, toggled by a single env variable
- Styled the composer, review, and timeline views with Tailwind CSS and a shared API type

Internship Alert Bot | *Python, Discord API, GitHub Actions*

[GitHub](#)

- Built a Discord bot that alerts a channel to new SWE internships every 30 minutes
- Wrote a direct ATS poller across Greenhouse, Lever, Ashby, Workday, and SmartRecruiters
- Designed a dedup key that normalizes company and title text across sources
- Automated the watch cycle with GitHub Actions, persisting seen-listing state back to the repo

Restaurant Finder | *Python, FastAPI, React, Leaflet*

[GitHub](#) | [Live Demo](#)

- Built a full-stack app that finds, categorizes, and randomly picks nearby restaurants
- Wrote a FastAPI backend querying the Overpass and Nominatim APIs, with no API key required
- Built a React frontend with a live Leaflet map, category filters, and geolocation search
- Added a "Surprise Me" feature with a case-opening reel animation for random picks

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, RobotC

Frameworks/Tools: React, FastAPI, Node.js, Git, Command Line

Other Skills: People Management, Customer Service, Cooperation
